- The "100 Squared"™ are the excellent building blocks when designing systems or stand alone single board computers.

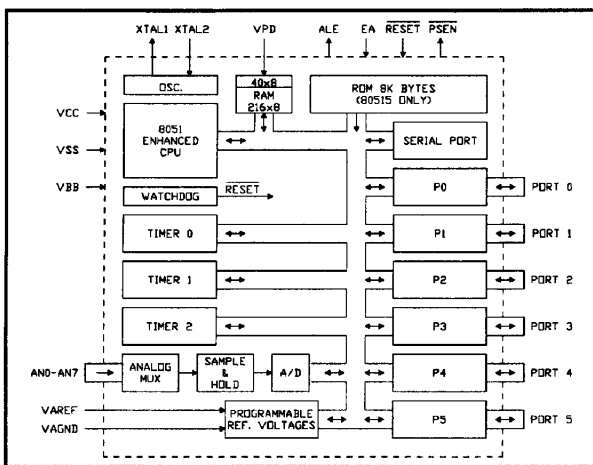

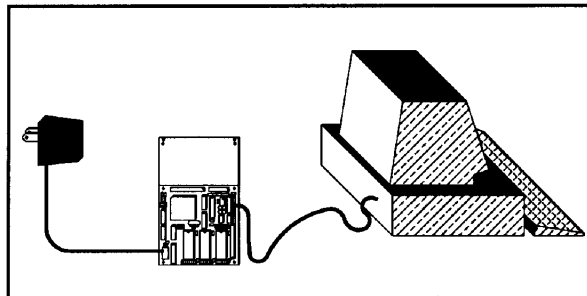

NMIX-0016

NMIX-0016 80535 CPU CARD "100 Squared"

The "100 Squared"™ were named for their size, with 100x100mm of active component area, on a 100x160mm Eurocard format. The system is compatible with most of the New Micros NMIX, NMIT and NMIS series peripherals. The VSC-34 connectors have the same pin-outs on all of these boards. The 28-pin JEDEC memory sockets allow flexible memory configurations.

Smart terminals, or personal computers with communications packages, can download source code to the NMIX-0016 via RS-232 ports. Interactive code development on the target system gives fast and efficient debugging. The optional languages gives machine level access.

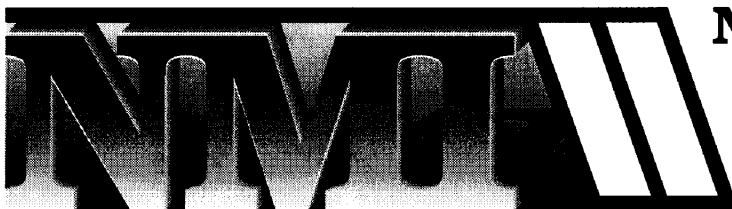

The NMIX-0016 makes a very cost effective solution as a development system for the 80535, particularly when small size and ease of development are required. Few single board computer offers as many features in such a small space. Optional, on-board High Level Languages include: FORTH, BASIC and Assembly Language. FORTH and C cross compilers, and cross assemblers, are also available.
